DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a method for solvent extraction of analytes from a sample, classified in class 436, subclass 91.
- II. Claims 22-35, drawn to an apparatus for dynamic extraction of analytes from a sample with a heated solvent, classified in class 422, subclass 101.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claims can be practiced by hand. A simple extraction procedure involving contacting a liquid with a solvent and mixing (shaking) to allow extraction to occur can be done my hand. Contents remain under pressure by use of a stop-cock to keep pressure in mixing vessel.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Kate Murashige on June 7, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1743

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
